T04-E01-08 With 8 function remote  
T04-E01-15 With 15 function remote

CV4501 45A Power converter / charger

## T04-EP01 -vs- T04-EP02

### T04-EP01

- Applies / releases service brakes only. Air sent to the emergency line is not controlled by an individual valve, therefore the emergency line remains under constant pressure ( Brakes Released ) until the unit is disconnected from the air source.
- One regulator, provides the same air pressure to both emergency and service lines.

### T04-EP02

- Twin valves apply, release and control emergency and service brakes individually.
- Dual regulators, allow separately regulated air pressures to emergency and service lines as required.

## 15 Function remote (15FR) -vs- 8 function remote (8FR)

### 8FR

- Maximum range of 100'
- Sequence and four way flasher features unavailable

### 15FR

- 15FR remote works well in any building and circumstance. Maximum range 200'.
- Flasher feature allows for checking turn signals and four way flashers and the "sequence" feature allows the technician to progressively activate lights during his walk around by using the same button on the remote control.
